

370HR Laminate 370HR Prepreg

370HR is a high performance 180°C glass transition temperature (Tg) FR-4 system for multilayer printed wiring board (PWB) applications where maximum thermal performance and reliability are required. 370HR laminate and prepreg products are manufactured with a unique high performance multifunctional epoxy resin, reinforced with electrical grade (E-glass) glass fabric. This system provides improved thermal performance and low expansion rates in comparison to traditional FR-4 while retaining FR-4 processability. In addition to this superior thermal performance the mechanical, chemical and moisture resistance properties all equal or exceed the performance of traditional FR-4 materials. The 370HR system is also laser fluorescing and UV blocking for maximum compatibility with automated optical inspection systems (AOI), optical positioning systems and photoimageable soldermask imaging.

Industry Approvals

IPC-4101C /21, /24, /26, /98, /99, /101, /126

UL Recognized – FR-4, File Number E41625

Qualified to UL's MCIL Program

High Thermal Performance

Tg of 180 C (DSC)

Low CTE for reliability

UV Blocking and AOI Fluorescence

High throughput and accuracy during PCB fabrication and assembly

Superior Processing

Closest to conventional FR-4 processing of all high speed materials

Standard Availability

Thickness: 0.002" [.05 mm] to 0.093" [2.4 mm]

Available in sheet or panel form

Copper Foil Cladding: Grade 3 (HTE), ½, 1 and 2 oz.

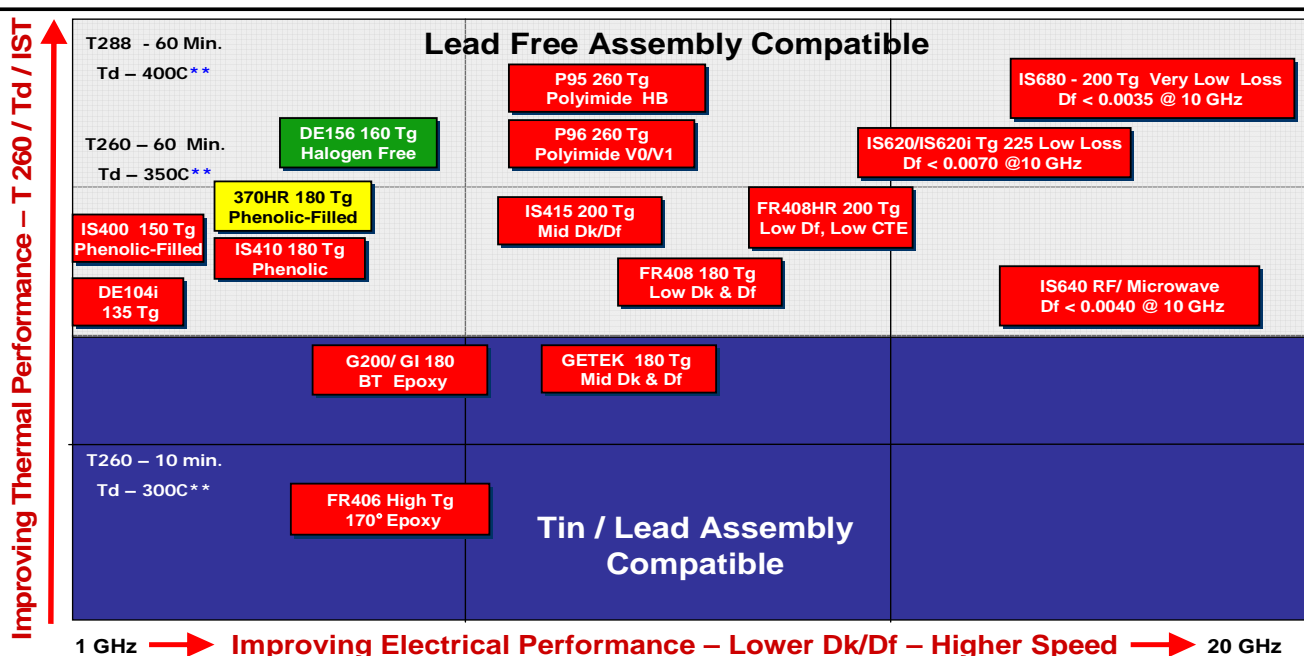

Foil Options: Reverse treat

Prepregs: Available in roll or panel form

Glass Styles: standard fabrics

Isola - Product Position Thermal Performance vs Signal Integrity

Speed is a function of design such as line length etc.

** Laminate Data - IST performance is a function of Hole diameter, board thickness, plating parameters and laminate attributes.
